

The Smartphone and Wearable Data for Health Research Database

Imagine a world where your phone and smartwatch could predict illness before it starts

Researchers are exploring how smartphone and/or wearable data relate to information found in people's health records and need 10,000 volunteers to help make this a reality

What will you have to do?

Review the study information & agree to take part

Complete a health questionnaire online & allow us to access your health record data

Download the smart+health smartphone app to send us activity and health data

Review your health information every 3 months

We will receive your smartphone and/or wearable data and retrieve details from your health records. Then we'll remove any identifiable information from the data for approved research projects

Any adult (over 18yrs old) who uses a smartphone and email can take part
